PROFILE

Experienced Software Engineer with a passion for problem-solving and debugging. Adept in all stages of development, from project planning to testing, optimizing, and maintaining code.

Fast learner and very motivated, always striving to improve. I highly value good communication and I love working in a team but I am also able to effectively self-manage during independent projects.

I am looking for a fully remote opportunity.

EMPLOYMENT HISTORY

Full Stack Software Engineer, Salonized

Amsterdam, NL

Feb 2019 — Present

Salonized is a salon software that provides a complete toolkit to manage a beauty salon. This includes keeping track of appointments, sales, and the client base, as well as automated messages, a booking widget, and financial reports, among other features.

I have been involved in the company since it was a startup and have worked on almost every aspect of the application. Other than being involved in architecture discussions, writing code, and testing, I have also had some experience with query optimization and some DevOps tools like Docker and Kubernetes.

On top of my engineering skills, I have experience working both with and without Sprint & Agile methodology, training junior developers, interviewing candidates, and working in cross-functional teams to achieve company OKRs.

I am a fast learner and was promoted from Junior Developer after less than 2 years.

EDUCATION

Web Development, Le Wagon

Amsterdam, NL

2018

Coding Bootcamp designed to help grasp programming foundations, write robust code with object-oriented programming, and build MVC software from scratch.

I learned about relational databases and SQL and developed responsive web pages with HTML and CSS, modern JavaScript, and Ruby.

LLB Law, University of Southampton

Southampton, UK

Sep 2011 — Jun 2014
